

Are your patients tired of being tired?

Introducing the new Energy Essentials Profile

ENERGY ESSENTIALS

Fatigue is one of the top chronic reasons for doctors' visits, especially among women. Other common symptoms patients present include mood imbalances, lack of concentration, skin disorders, muscle aches, and inability to handle stress.

The Energy Essentials Profile can help to identify some of the underlying causes of these issues, and help your patients get back on the road to wellness.

The Energy Essentials Profile analyzes areas of:

- Cellular Energy
- Detoxification
- Inflammation
- B-Vitamin Sufficiency

The Energy Essentials Profile is a great entry point to identify a patient's metabolic abnormalities when fatigue is the main complaint. It also serves as a possible follow-up option for the Metabolic Profile, when results show imbalances in the areas of B-vitamins, detoxification, and cellular metabolism.

**Patient Pre-Pay and
Practitioner Price:
\$139.00**

PrePay Advantage: A Courtesy Insurance Filing Program

PrePay Advantage
Courtesy Insurance Filing

Metametrix is excited to announce a new courtesy insurance filing program for all patient prepaid test submissions. Metametrix will submit insurance claims as a courtesy for patients that include full payment at the "Patient Prepay" price with specimen submission.

Contact your DFH health educator to order your Energy Essentials Profile kits today!
