

# Cannab-PEA 300™

Helps With Occasional Minor Discomfort\*

Cannab-PEA 300™ combines 300 mg of palmitoylethanolamide (PEA) with 10 mg of standardized, full-spectrum phytocannabinoids per capsule for a synergistic effect to support endocannabinoid signaling and a normal pain response.\* It utilizes the innovative ComboCap® delivery to combine a powder and a liquid into one capsule.

The body creates PEA when needed to stimulate a variety of biological effects and to maintain balance. It is also found in various food sources, including peanuts, soybeans, eggs, milk, tomatoes, and black-eyed peas.

PEA helps moderate the immune system to support a healthy pain and inflammatory response.\* It also acts on the endocannabinoid system (ECS), which is a signaling system in the body that interacts with many other systems and tissues, including the central nervous system, immune system, reproductive system, gastrointestinal tract, arteries, lungs, and heart.

PEA directly or indirectly stimulates the body's own endocannabinoid activity. Research supports a role for modulation of the endocannabinoid system in supporting a variety of issues, including a normal response to pain and a healthy inflammatory response.\*

Phytocannabinoids act on the ECS similar to the body's own endocannabinoids. Cannab-PEA 300™ contains all naturally present phytocannabinoids, including THC below 0.3%, and terpenes found throughout the entire plant, including the flowers, seeds, and stalk fibers. These biologically active compounds work together to enhance the effects of the phytocannabinoids.

## Benefits\*

- Supports a normal pain response
- Supports a healthy inflammatory response
- Helps with mild and occasional discomfort

## Recommended Use

Take 1 capsule once daily with a meal or as directed by your health-care practitioner.

## Highlights

- Highly bioavailable Levagen® PEA in a micronized form
- Full-spectrum phytocannabinoids with <0.3% THC with Certificate of Analysis available online
- PEA and full-spectrum phytocannabinoids are combined for their synergistic role on the endocannabinoid system
- ComboCap® unique technology provides the combination of a powder and a liquid into one capsule
