

# ArthroSoothe™ Cream

*Topical cream to support joint health\**

ArthroSoothe™ Cream contains compounds clinically proven to support joint health, such as glucosamine, chondroitin and MSM, combined with aloe vera gel, emu oil, arnica and other natural compounds known for their healing effects.\* It offers ideal support for joint health in a topical cream designed to alleviate occasional discomfort associated with overworked joints and muscles through its unique tissue-warming and surface-cooling effects.

Joints, cartilage, ligaments, tendons and synovial fluid (which surrounds and lubricates the joints) undergo a continuous but slow natural regeneration process. This process can be affected by many factors including nutrition, activity levels, hormones, stress, aging, immune status, gut health, toxin loads and certain medications. Proper nutrition provides valuable compounds that can help joints and associated tissues to function at their best.

## Highlights

- **Glucosamine, sulfur (MSM), hyaluronic acid** – support collagen synthesis (found in tendons, cartilage, and ligaments)
- **White willow bark, capsicum, arnica, chamomile, calendula and witch hazel** – powerful botanicals that deliver maximum support for a healthy inflammatory response and reduce occasional discomfort associated with joint damage\*
- **Menthol and oils of peppermint, cajeput, tea tree, oregano and eucalyptus** – provide a gentle cooling effect, followed by a warming effect that eases discomfort and delivers relief for sore joints\*
- **Emu oil, aloe vera gel, capric/caprylic triglycerides** – provide ultimate moisture and a skin-loving, absorptive medium for active ingredients

## How should ArthroSoothe™ Cream be used?

This rub-on cream is a wonderful complement to our encapsulated ArthroSoothe™ product. Topical application of ArthroSoothe™ Cream provides quick results with tissue-warming and surface-cooling effects while the capsules work on repairing and lubricating joints.

### Benefits:

- Delivers immediate relief to sore joints through a topical cooling effect
- Provides comprehensive support for promoting healthy joint function
- Helps to manage a healthy inflammatory response in joint tissue
