

Liposomal Cat's Claw Synergy

Highly absorbable cat's claw, monolaurin and adjunct ingredients for immune system support*

Liposomal Cat's Claw Synergy provides cat's claw and monolaurin, two ingredients known for their role in supporting the immune system, along with additional ingredients to promote healthy immune function.*

Cat's Claw

Uncaria tomentosa, better known as cat's claw, is a plant indigenous to the Amazon rain forest and other tropical areas of South America. The use of cat's claw for medicinal purposes dates back at least as far as the Inca civilization, where it was used as an anti-inflammatory, to fight viral infections and to stimulate the immune system. Cat's claw remains a sacred plant among several indigenous Peruvian and Amazonian tribes, and modern scientific research has confirmed the antiviral, antioxidant, immune-modulating effects of this plant, as well as its ability to support a healthy inflammatory response.* Cat's claw preparations are made from the plant's roots and the vine bark, which are crushed and made into tea or into extracts such as that in Liposomal Cat's Claw Synergy.

Benefits of Liposomal Technology

- Rapid uptake, starting in the mouth
- Effective, efficient absorption in the body
- Longer circulation in the body for effective nutrient delivery

Monolaurin

Monolaurin is a powerful antiviral and antibacterial agent with efficacy across an impressive array of harmful organisms and viruses, yeasts, and fungi.* Unlike conventional antibiotics, it has not been shown to result in antibacterial resistance, nor to have adverse effects on beneficial gut flora.* Humans metabolize small amounts of monolaurin from lauric acid (such as is found in coconut oil), but the amount is believed to be relatively low. Lauric acid itself has antiviral and antibacterial properties but monolaurin is more potent, and in order to achieve the desired outcome with regard to supporting immune function, it may be necessary to supplement with higher amounts than would be obtained from reasonable consumption of coconut products in the diet.

Additional Ingredients

Liposomal Cat's Claw Synergy includes vitamin D3, which is well known for its role in supporting the immune system.*

Lemon balm extract contains oils that have antibacterial and antiviral properties. It also helps promote mental calm by encouraging the action of GABA, the brain's primary inhibitory neurotransmitter. Owing to the role of the sympathetic nervous system ("fight or flight") in influencing immune function, the calming effects of lemon balm are a helpful complement to its immune functions.*

How to Take

- As a dietary supplement, take 1 mL (approx. 2 pumps), or as directed by your health care practitioner.
- Since the very small size of the liposome particles allows for some absorption to take place right away, it is recommended to hold the product in the mouth for 30 seconds before swallowing.

Consult with your healthcare practitioner about your specific circumstances and any questions you may have.
