

Prostect™

*Synergistic formula to support healthy prostate and urinary function**

Prostect™ is a novel formulation that provides synergistic and complementary action to support optimal prostate and urinary health.* The prostate is a small gland that surrounds the neck of the bladder and urethra, both of which are responsible for ensuring healthy urinary flow. The most well known function of the prostate gland is to manufacture and secrete seminal fluid, which includes the sperm necessary for human reproduction. This fluid also helps maintain a moist lining in the urethra, which is the tube through which urine and seminal fluids flow out of the body.

Men do not always have an easy time talking about their health. This is especially true regarding sexual function and urinary tract health. But there's no reason to shy away from these topics, as they are so important to address. Prostate gland function—like that of just about every other part of the body—can be affected by diet, lifestyle, hormonal changes, and other factors. A healthy prostate is important for men of all ages, but it becomes a subject of increasing concern as men age. Additionally, some of the hormonal changes that influence the health of the prostate can have effects elsewhere in the body, so targeted supplementation that offers support to the prostate gland may benefit a man's overall health.

Highlights

Flower Pollen Extract – This is a standardized extract harvested directly from flowers. It is essentially the pollen found in flowers before bees extract it. The pollen grains used to make this extract contain a comprehensive profile of nutrients including vitamins, minerals, carotenoids, enzymes, and flavonoids, all important for human health, and shown to act beneficially on prostate cells. Specifically, flower pollen extract has been shown to support proper cell replication in the prostate gland and may help with urinary tract function related to the prostate, including urinary frequency.* The patented extract in Prostect™ is manufactured using an extraction process which includes the removal of the hard-to-digest, allergenic components of the outer husk so these internal nutrients can be released and the body can absorb them. This process also ensures a standardization of its active ingredients.

Cranberry and Pomegranate Extracts – Cranberry is one of the most well-researched compounds for urinary tract health. Cranberry and pomegranate both contain powerful antioxidants, and pomegranate may support healthy levels of nitric oxide, a compound that influences blood vessel dilation, and as a result, may support erectile function. Pomegranate also contains compounds that promote proper hormone metabolism, further supporting male sexual health.

How to Take: As a dietary supplement, take three capsules per day with a meal, or as directed by your health care practitioner.

This formula has been crafted to be the most comprehensive approach to prostate health in order to support*:

- Proper urination flow and frequency
- Healthy prostate size and function
- Normal erectile function
- Proper balance of testosterone to estrogen hormones

Consult with your healthcare practitioner about your specific circumstances and any questions you may have.
